

BERRYBROOK SCHOOL

DUXBURY, MA

SCHOOL CAMPUS DESIGN

A school campus, whether a pre-school, elementary, middle or high school has a plethora of special design parameters. Age appropriate design is critical to success. The campus landscape should provide opportunity for both active and passive recreation and provide opportunity for community involvement. The connection between indoor and outdoor space is very important and the resulting environment should facilitate growth and development.

BERRYBROOK SCHOOL

Located in a rural/woodland setting Berrybrook School is a pre-school for ages 3 to 5. The campus occupies 27 acres of which approximately two acres are developed for school related activities. The desire to save existing trees coupled with an interactive/learning landscape were the primary design influences. Architectural enhancement along with shade and screen planting results in an exciting and functional landscape for learning and play.
