Various Projects

Planting Design

Design for trees, shrubs, groundcovers and perennials is a major aspect of nearly every MKA project. Often the design objective is for specialized displays with decorative themes appropriate for highly visible centerpiece plantings, perennial borders, special gardens or residential landscapes.

We design to enhance natural land features, buildings, roadways, walks, and site structures of various scales. The intent in most landscape applications is to provide screening, articulate space, define edges, provide shade, scale and seasonal interest. Other planting design endeavors include woodland and wetland restorations.

Our projects vary in size from small residential gardens to large scale streetscapes, urban plazas, parks, residential, commercial, industrial and institutional developments. Regardless of size, MKA will select and artfully compose the appropriate plants to achieve the desired aesthetic and function.
